Forecast for Friday 03 Dec 2021

Weather: A damp start to the night with some drizzle, summit snow flurries, extensive low cloud and hill fog. It will become mainly dry during the early hours, the cloud gradually lifting and then breaking. Daylight hours wil bring a mixture of bright or sunny intervals and a few showers, of snow above 700m. Then towards the evening cloud will thicken and lower from the west with some more persistent rain and hill snow developing, heavy at times. Perhaps blizzard conditions on the tops.

Chance of cloud free mountain/hill tops above 800m: 10% in early hours improving to 40% by dawn and 60% during the day, falling 10% in the evening.

Visibility: Poor in early hours due to a combination of cloud as low as 300-600m and some drizzle or light snow, but mainly good during the day away from cloud, which will become occasional above 800-900m. Widely poor in the evening in rain and snow and extensive cloud at 450-750m.
